

THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

Northrup King Co.

Withereas, there has been presented to the

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF eighteen years from the date of this grant, subject to the payment of the required fees and periodic replenishment of viable basic seed of the variety in a public repository as provided by LAW, the right to exclude others from selling the variety, or offering it for sale, or reproducing it, importing it, or exporting it, or using it in producing a hybrid or different therefrom, to the extent provided by the Plant Variety Protection Act 1542, as amended, 7 u.s.c. 2321 et seq.)

SOYBEAN

'S36-36'

In Institution Withercot, I have hereunto set my hand and caused the seal of the Plant Variety Protection Office to be affixed at the City of Washington, D. C. this 31st day of July in the year of our Lord one thousand nine hundred and ninety.

EXHIBIT A

Origin and Breeding History of the Variety

- 1980-82. The Northrup King soybean research group at Washington, Iowa made the cross 'Charger' x 'A3860' and advanced the population to F4. In February, 1982, the Northrup King soybean research group from St. Joseph, Illinois harvested 100 random plants and threshed them individually. The Northrup King soybean research group at St. Joseph, Illinois grew each of the 100 plant selections in an Fs progeny row. One of these, numbered J218246, was selected on the basis of agronomic appearance to be tested in a preliminary yield trial. This line was subsequently named S36-36.
- 1983-85. We tested S36-36 in replicated yield trials at several midwestern locations and found it to yield well in comparison to other group III varieties. We identified and confirmed the descriptive characteristics purple flowers, tawny pubescence, brown pods, and dull seed coat luster, but found it to be heterogeneous for hila color. We tested S36-36 for resistance to Races 1, 2, 3, 4, and 7 of Phytophthora megasperma by inoculation of detached cotyledons. It is uniformly susceptible to these races.

In the winter of 1984-85, we initiated a pedigree purification increase by harvesting 100 plants with brown hila and threshing individually.

In 1985 we grew each of these 100 plant selections in a progeny row and confirmed that each row was uniform for brown hila and other descriptive characteristics. These 100 progeny rows were then bulked to form the initial increase.

1986-87. We continued to test \$36-36 in advanced yield trials to confirm descriptive characteristics and performance.

We grew Breeder Seed of S36-36 in 1986 from the pedigree purification increase made in 1985. We produced Foundation Seed of S36-36 in 1987. The Iowa Crop Improvement Association inspected the production fields and found them to meet the requirements for Foundation Seed. S36-36 was approved for eligibility for certification by the National Soybean Variety Review Board on December 10, 1987.

S36-36 is a stable and uniform soybean variety except that it has both high and low seed peroxidase activity. We have observed no other variants in two years of testing and two years of seed increase other than minor, environmentally induced variations normally encountered in a soybean variety.

We will maintain varietal purity by use of progeny rows as needed.

EXHIBIT B

Novelty Statement for the Variety

Soybean variety S36-36 is most similar to Harper. It can be differentiated from Harper on the basis of hilum color. Seeds of S36-36 have brown hila while seeds of Harper have black hila.

EXHIBIT D

Additional Description of the Variety

Soybean variety S36-36 is a mid Group III cultivar maturing between Pella and Williams 82. It exhibits long hypocotyl reaction when grown in 11.4 centimeters of sand at 25°C for 14 days.

EXHIBIT E

Statement of the Basis of Applicant's Ownership

Soybean variety S36-36 was developed by the Northrup King Company soybean breeding staff from germplasm sources cited in Exhibit A of the application. Northrup King Company believes that the variety is novel as defined in the Plant Variety Protection Act and, therefore, that Northrup King Company is the sole owner of the variety.
